Functions

Original CC0 evaluation fixture - generated locally

The slope between (x1,y1) and (x2,y2) is (y2-y1)/(x2-x1) when x2 differs from x1.

Function composition is (f composed with g)(x) = f(g(x)). The input must lie in the doma in of g and g(x) in the domain of f.

Sequences

Original CC0 evaluation fixture - generated locally

An arithmetic sequence with first term a1 and common difference d has nth term an = a1 + (n-1)d.

A geometric sequence with first term a1 and ratio r has nth term an = a1*r^(n-1).
